## **Intelligent Heat and Power Installs 20 Ton Geothermal Heating and Cooling System at Verdant Pastures Auditorium**

**System expected to cut annual energy costs by up to 50%**

Stratham, New Hampshire, Sept. 3rd – Intelligent Heat and Power today announced the installation of a 20 ton geothermal heating and cooling system at the [Verdant Pastures](#) auditorium on Ladd’s Lane in Epping, NH. The auditorium is the new home of the [Leddy Center for the Performing Arts](#). The new geothermal system will be operational before the next Leddy Center performance on October 16<sup>th</sup>.

“We are thrilled to be able to install such an environmentally friendly heating and cooling system in our beautiful auditorium,” said Steve Kaneb. Steve and his wife, Andrea, bought the unique 93 acre property in 2008. The auditorium is the first building they renovated at Verdant Pastures. “While over 200 patrons enjoy the indoor climate of the auditorium, they can also feel good knowing that the heating and cooling is friendly to our global environment. We needed to replace the air conditioning system for the auditorium. A geothermal system makes long-term economic sense and helps roll out part of our vision for Verdant Pastures.”

“A [geothermal heating and cooling system](#) such as this one is an excellent choice for a commercial or private property,” said Jeffrey Brideau, President of Intelligent Heat and Power. “These systems, also known as ground source heat pumps, concentrate the heat from the ground and pump it into the building in the winter to heat it. Conversely, in the summer they concentrate the heat in the building and pump it into the ground to cool the building. They are extremely efficient over a huge range of temperatures, from sub-zero winter mornings to 100 degree summer days. In addition they can save up to 70% on your heating and cooling bills while reducing the impact on our environment.”

About Intelligent Heat and Power:

Intelligent Heat and Power has two main goals -to save our customers money and to preserve the environment. [Intelligent Heat and Power](#), LLC specializes in providing real money-saving energy solutions for homes or commercial buildings. From heating and air conditioning to power generation, Intelligent Heat and Power provides solutions that will save money and save the environment.
